

Jyothi Ratnam Maridu

Java Backend Engineer | Spring Boot | Kafka | Distributed Systems

jyothiratnam12345@gmail.com | 6281038095 | Hyderabad | [LinkedIn Profile](#) | [Portfolio](#)

SUMMARY

Backend Engineer with 3+ years of experience building scalable backend systems, distributed systems, and real-time processing platforms using Java and Spring Boot. Experienced with event-driven architecture, Kafka-based pipelines, REST APIs, MQTT communication, and concurrent processing in production environments handling 500k+ records. Skilled in improving system reliability, fault tolerance, high availability, and backend performance optimization.

EXPERIENCE

Linkwell Telesystems Pvt Ltd, Associate Engineer 19/06/2023 – Present | Hyderabad

- Built scalable backend systems using Java, Spring Boot, and REST APIs for high-volume production applications
- Implemented scalable APIs and asynchronous processing workflows improving response handling efficiency
- Integrated MySQL query optimization techniques reducing database execution time
- Diagnosed and resolved production issues in live server environments ensuring high system availability
- Managed deployments and backend maintenance on Apache Tomcat, NGINX and Linux servers

PROJECTS

File Processing Pipeline using Apache Kafka, File Processing Services

- Lowered processing latency by **40%** through asynchronous messaging and parallel consumer execution
- Achieved **99.9% processing reliability** with retry handling and Dead Letter Queue (DLQ) implementation
- Enabled scalable concurrent processing through Kafka partitions and consumer groups
- Reduced deployment effort by **50%** through Docker-based containerization

Tech Stack: Java, Spring Boot, Apache Kafka, REST APIs, MySQL, Docker, Consumer Groups, DLQ, Linux

V400 & V600 Production Server, Production Server Maintenance

- Managed backend systems handling 500k+ records in high-load production environments
- Reduced **human errors by ~60%** by automating validation, upload, and reporting workflows
- Improved backend data processing efficiency by **45%** through optimized service integration and query handling
- Maintained high availability and 99.9% system uptime in production server environments
- Reduced manual operational effort by **70%** through bulk upload and export capabilities

Tech Stack: Java, JSP, Servlets, REST APIs, MySQL, Apache Tomcat, Apache POI, Linux, CSV/XLS/XLSX Processing

AppSign, APK Signing Platform

- Streamlined APK signing operations, reducing manual signing effort by **80%**

- Accelerated upload-to-signing turnaround time by 50% through automated upload-to-signing workflows
- Strengthened application security through controlled JKS key access and validation checks
- Implemented secure file handling for reliable upload, signing, and download management

Tech Stack: Java, Spring Boot, REST APIs, JKS Certificates, File Handling, Apache Tomcat, Linux.

MQTT Device Communication System, Remote Device Monitoring System

- Implemented real-time bidirectional communication between backend services and remote devices
- Designed scalable topic-based messaging architecture for reliable concurrent device communication
- Achieved **99% message delivery reliability** through QoS policies, retry handling, and persistent sessions
- Supported **thousands of concurrent device connections** through scalable topic-based messaging architecture
- Reduced device response latency by **30%**, improving communication efficiency in live environments

Tech Stack: Java, MQTT, REST APIs, Multithreading, Linux, TCP/IP Communication

Log Upload Server, Secure File Management

- Secured device log uploads through API key authentication and request validation
- Eliminated unauthorized upload access through controlled authentication mechanisms
- Reduced manual file handling errors by **65%** through automated storage organization
- Improved log retrieval efficiency by **40%** with structured user-specific storage architecture

Tech Stack: Java Servlets, REST APIs, MySQL, Apache Tomcat, API Key Authentication, File Handling, Linux

FPMS, Scanner Analysis Dashboard & Metrics System

- Delivered real-time analytics dashboard for monitoring scanner device performance and operational metrics
- Reduced SQL query execution time by **35%** through database optimization and indexing strategies
- Improved monitoring efficiency by **50%** with dynamic backend-driven reporting
- Enabled faster operational decision-making through real-time analytics visualization

Tech Stack: Java, JSP, Servlets, MySQL, Apache Tomcat, SQL Query Optimization, HTML, CSS, JavaScript

SKILLS

- **Programming Languages** — Java, SQL
- **Backend** — Spring Boot, Servlets, JSP, REST APIs, Microservices
- **Security** — Spring Security, JWT Authentication
- **Databases** — MySQL, MongoDB
- **Messaging** — Apache Kafka, MQTT
- **Frontend** — React, HTML, CSS
- **Tools & Technologies** — Git, Maven, Docker, Nginx, Tomcat, Postman
- **Concepts** — Distributed Systems, Event-Driven Architecture, Fault Tolerance, API Design
- **File Processing** — CSV, XLS, XLSX (Apache POI)

EDUCATION

B.Tech,
Rajiv Gandhi University of Knowledge and Technologies

2019 – 2023 | Nuzvid
